

# WAVECOM® W-PCI-LAN

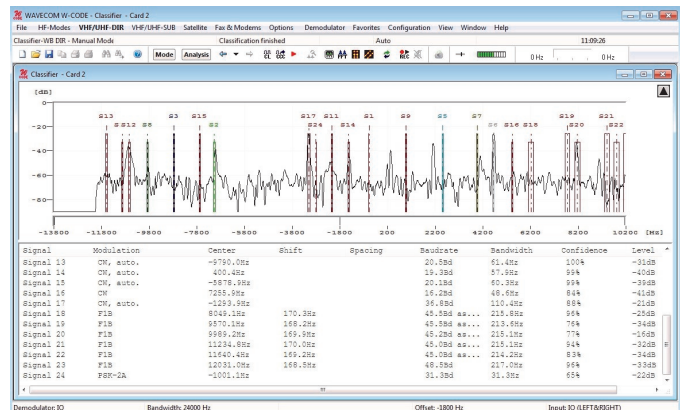

The W-PCI-LAN decoder offers all the functions of the W-PCI decoder hardware and software plus all the advantages of a compact and powerful computer system. The system is implemented in a ruggedized aluminium box with fanless cooling. W-PCI-LAN offers two completely independent Digital Down Converter inputs (DDC) at IF and AF level and supports dual channel simultaneous decoding on one card. W-PCI-LAN delivers a modern complete solution with various interfaces in hardware and software.

## W-PCI-LAN Features and Facts

- ◆ W-PCI-LAN provides all functions required to analyze, decode, record and process radio data communications throughout the radio spectrum from HF to SHF. Decoder software covers all functionalities of W-CODE.
- ◆ W-PCI-LAN offers automated or manual monitoring of radio data and voice communications from HF to SHF bands.
- ◆ W-PCI-LAN can be connected to a PC or notebook via LAN or may operate as a stand-alone system. As the W-PCI-LAN operates from 9-30 V DC power sources, it is very well suited for mobile use.
- ◆ W-PCI-LAN offers two high-quality DDC inputs with wideband frequency range. The DDCs extract the narrowband signal of interest from a broadband input signal. The extracted signal is then used for further analysis, decoding and recording.
- ◆ W-PCI-LAN supports Software Defined Radios (SDR), W-CLOUD, VSC, standard VACs and all I/Q data or digital inputs.
- ◆ Built-in SSD (1 TB) suitable for wideband signal recording.
- ◆ W-PCI-LAN supports remote control from other applications using third party software with TCP/IP and XML.
- ◆ A W-PCI-LAN decoder can be controlled from anywhere across the network, and its output can be sent to one or more applications on the network.
- ◆ System components for radio monitoring and decoding can be individually configured according to the requirements of the customer.
- ◆ The host computer is in a ruggedized aluminium box. The cableless construction enables an easy plug-in of extension components and cards. This reduces failure risk later by loose cables.
- ◆ With the fanless cooling system W-PCI-LAN is suitable to work in an adverse environment.

## Signal Sources and Devices

- ◆ Two lines of decoding on one card: genuine simultaneous dual channel decoding of two different signals.
- ◆ W-PCI-LAN supports a great number of input interfaces and devices. The application processing the signal sources and devices for W-PCI-LAN is compatible with W-CODE.
- ◆ A number of other interfaces, e.g. SDR I/Q data or digital TCP/IP input streams using W-CLOUD, IP-PXGF, Virtual Audio Cable (VAC) or WinRADiO Digital Bridge Virtual Sound Card (VSC) and built-in soundcard input with sampling rates of up to 192 kHz, are also available with W-PCI-LAN.
- ◆ W-PCI-LAN is tested with a number of SDRs, e.g. WinRADiO G33DDC and G39DDC, Grintek GRXLAN, Perseus, netSDR, SDR-IP, SDR-IQ, Rohde & Schwarz receivers and MEDAV LR2.
- ◆ W-PCI-LAN supports direct digital I/Q input and output of WAV files with integrated Wavecom Media Player/Recorder.

- ◆ W-PCI-LAN offers two completely independent DDC (Digital Down Converter) inputs at IF and AF level from 0 – 25 MHz or 70 MHz +/-17.5 MHz. The two DDCs extract the narrowband signal of interest from a broadband input signal.
- ◆ DDCs correspond to the well-known Software Defined Radio (SDR) technology.

## Wide Range of Applications

The screenshot displays the WAVECOM W-CODE software interface, which is used for signal processing and decoding. The interface is divided into several sections:

- Automatic Signal Classification:** The top section shows a spectrogram and a table of detected signals. The table lists three signals with their respective modulation, center offset, spacing, baudrate, bandwidth, and confidence.
 

Signal	Modulation	Center	Offset	Spacing	Baudrate	Bandwidth	Confidence
Signal 1	PSK-QA, STANAG-4285 MOR (USB)	-4143.1Hz			2400.0Hz	2400.0Hz	88%
Signal 2	PSK-QA	4095.0Hz			2399.9Hz	2399.9Hz	89%
Signal 3	PSK-QA, STANAG-4285 MOR (USB)	8396.2Hz			2400.1Hz	2400.1Hz	89%
- Data Decoding:** The middle section displays the decoded data, which appears to be a text message in Kannada script.
